
Template Demos

When inserting templates and asked "Apply the settings of this Container too?", please choose "Don't Apply".

0-0 Master Empty Container

Contains one empty padded flexbox and one empty non-padded flexbox. This one is going to be the easiest as a starting point for manipulating into whatever layout you want.

1-0 - One Column Base

Contains one empty padded flexbox.

1-1 - Video/Image Hero Section

Hexagon Robotics

Empowering Humanity

1-2 - Header Primary

These were put together with the lines as an image overlaying a masked image. To change the image in the mask you will have to open up the Structure tab in elementor. When you click the image to edit it will select the image that is on top (the lines). Look at the structure window now and you will see an image layered above the image you just selected. That is the one you must change the content of.

If you want to change the mask/lines from a custom file you made, ensure they are the exact same size and everything is in the exact same place, even though they are two separate files. Also, **it will not be responsive unless any angled lines are stemming from the exact vertical center of the image height.**

1-7 - Job Post Listings

Job Posts will automatically feed to this template. To add a job post, go the "Job Posts" in the side admin bard on the WP dashboard. To properly put the information into the job post, scroll down after adding a new Job Post to "More Fields". This is where you will input:

Position Name
Position Location
Link to Position
Job Description

DevOps Tech Lead (f/m/d)
Zurich

Team Lead (f/m/d) SDK & Data Integrations
Zurich

Team Lead Fullstack (f/m/d)
Zurich

Senior Team Lead (f/m/d) Infrastructure & Tooling
Zurich

Robot Operator (f/m/d) – Dexterous Manipulation
Zurich

Senior C++ Engineer (f/m/d) Geometry & Computer Vision
Zurich

2-0 - Two Column Base

Contains two empty padded flexboxes.

2-1 - Two Column Base with Grid

Contains two empty padded flexboxes with a grid line between.

2-2 - FlexFit Two Column Container

Contains two empty padded flexboxes. Whatever is in the left column will be width adjusted to fit the content (up to a maximum of 50%), and the right column will fill whatever is left.

Korem ipsum dolor sit amet, consectetur adipiscing elit. Nunc vulputate libero et velit interdum, ac aliquet odio mattis. Class aptent taciti sociosqu ad litora torquent per conubia nostra, per inceptos himenaeos.

2-2-1 - Manual FlexFit Two Column Container

Same as flexfit but you can manually set the width of the left column. Helpful if you have two rows where you want that column to look the same size

Note: This stacks vertically on tablet by default.

H2

Lorem ipsum dolor sit amet consectetur adipiscing elit. Quisque faucibus ex sapien vitae pellentesque sem placerat. In id cursus mi pretium tellus duis convallis. 4-0 - Four Column Base

Contains four empty padded flexboxes.

4-1 - Four Column Base - 2x2 on Tablet

Contains four empty padded flexboxes. Instead of four columns on tablet this turns into a 2x2 grid.

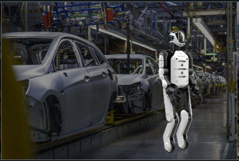
4-2 - Four Column Base with Grid

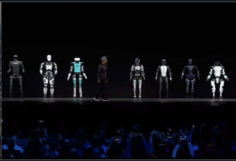
Contains four empty padded flexboxes with grid lines between.

4-3 - Four Column Base with Grid - 2x2 on Tablet

Contains four empty padded flexboxes with grid lines between. Instead of four columns on tablet this turns into a 2x2 grid.

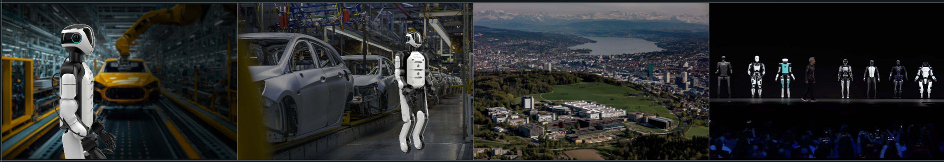
4-4 - Four Column Full Size Images





4-5 - Four Column Full Size Images - 2x2 on Tablet

Applies the 2x2 grid layout on tablet instead of four columns.



4-6- Expanding Columns Section

This needs JavaScript at the end of the page for it to work. You can find the JS here:

Elementor > Custom Code > ExpandingColumns JS.

Questions about how to use these?

Please reach out to paul.lagreca@leica-geosystems.com

Useful CSS classes & variables

Rounded divider

Use this to turn a regular divider into a thick rounded one like this:

```
.rounded-divider
```

Push Right Button

If a button is not animating the way the rest are, make sure it has this class. If you remove an icon from a button, I would make sure you remove this class.

```
.push-right-btn
```

FlexFit Classes

Use these to apply the flex fill width effects

```
.flex-row-fit-fill
/*Apply this to the container housing the columns*/

.fit-column
/*Apply this to the column that shrinks to content*/

.fill-column
/*Apply this to the column that will fill the rest of the space*/
```

OuterGridContainer

This class is applied to the most outside container in all templates. There is CSS to make the margins more seamless and keep up the thin gridwork between rows. If for some reason you are noticing the grid is thicker in one part when you place a template or create a new one, try adding this class to the most outside container.

```
.outerGridContainer
```

Mask Image Height

These are CSS classes and variables that drive the height of the masked images in the header section templates in order to make them responsive. The script for these that loads at the end of the page can be found in:

Elementor > Custom Code > Header Section Height Grabber JS

```
.mask-img-1-height-reader
  /* Element whose height defines --mask-img-1-height */

.mask-img-2-height-reader
  /* Element whose height defines --mask-img-2-height */

var(--mask-img-1-height)
  /* CSS variable used to size the masked image and overlay in Set 1 */

var(--mask-img-2-height)
  /* CSS variable used to size the masked image and overlay in Set 2 */
```

Variables that control site theme

You can plug these in to various parts of Elementor's editor. For instance, thinLineWidth is used for the various thin borders across the site so we can change them in the future if needed.

If you for some reason want to change the values of these, the variables are in Custom CSS under Elementor's Site Settings feature.
I do not reccomend you change these.

```
var(--gridSideSpacing)
var(--thinLineWidth)
var(--thickLineWidth)
var(--gridContainerPadding)
var(--containerVerticalSpacing)
var(--cardBorderRadius)
var(--cardSpacing)
```

Color variables

If you are writing custom CSS anywhere, you can still access the different global colors we have set by using these variables in your code.

```
var(--e-global-color-primary)
var(--e-global-color-secondary)
var(--e-global-color-text)
var(--e-global-color-accent)

/*Button Hover*/
var(--e-global-color-1b7fc61)

/*Button Color*/
var(--e-global-color-37029e5)

/*Thin Line Color*/
var(--e-global-color-d7fa53c)

/*Thick Line Color Main*/
var(--e-global-color-0e01939)

/*Thick Line Color Secondary*/
var(--e-global-color-3e9edd3)
```
